ECO TRACE

Mapping the Way
to Sustainability 🌿

Intugine

Benefits of Eco Trace

Enhanced Visibility

EcoTrace offers comprehensive real-time insights into Scope 3 emissions, including time series data on total carbon emissions and emissions per trip. Track lane and state-wise emissions, tonne-kilometers of goods shipped, and the Carbon Data Index for precise sustainability metrics.

Regulatory Compliances

The EcoTrace module ensures robust compliance with global standards, including Smart Freight Centre, ISO 14083, and the GHG Protocol. This commitment guarantees accurate greenhouse gas emissions accounting and reporting, meeting stringent international requirements.

Accelerate Decarbonization

Real-time visibility on carbon emissions across value chain touchpoints helps you determine the extent of emissions and highlights the scope of optimization. Our proprietary algorithm incorporates multiple variables to calculate scope 3 emissions across categories 4 and 9 (upstream and downstream transportation), accelerating your decarbonization efforts.

Intugine

Features of Eco Trace

- Seamless integrations with Enterprise management software, transport management software, etc. to automate trip-level data collection
- Integrations with 'Vahan' and 'Google Maps' to automate vehicle-centric data collection
- Proprietary carbon emission calculation algorithm that aligns with globally accepted calculating and reporting frameworks like GLEC and India GHG
